B.TECH THESIS & SEMINAR

- **LT Line Fault Detection System (IoT & Embedded Systems)**
(B.Tech Project) (August'25-Present)
Current work:
 - Designing an IoT-based system to detect faults in Low-Tension (LT) power distribution lines using sensors and micro-controllers.
 - Developing real-time monitoring and alert mechanisms for fault identification and preventive maintenance.
 - Implementing Embedded C programs for sensor data acquisition, processing, and fault classification.**Future work:**
 - Integrating cloud-based data logging and remote monitoring for continuous fault analysis.
 - Optimizing detection accuracy and response time using machine learning-based fault prediction techniques.
- **AI-Based Plant Disease Detection**
(Machine Learning Seminar) (January'25 - March'25)
 - Developed a machine learning model to identify plant diseases from leaf images using image classification techniques.
 - Performed image preprocessing, feature extraction, and dataset augmentation using OpenCV and Python.
 - Trained and evaluated classification models in Google Colab to improve disease detection accuracy.
 - Demonstrated the potential of AI-driven solutions for early disease diagnosis in agriculture.

COURSE PROJECTS

- **Retrieval-Augmented Generation (RAG) Chatbot, (Python | LangChain | Qdrant)** (Jan'26-Feb'26)
 - Developed an intelligent document question-answering system using LangChain and Qdrant vector database.
 - Implemented PDF ingestion, text chunking, embedding generation, and semantic search pipelines.
 - Generated context-aware responses using Large Language Models with Retrieval-Augmented Generation (RAG).
- **Multi-Agent Stock Analysis Assistant, (Python | LangGraph)** (Feb'26-Mar'26)
 - Built a multi-agent workflow for stock market analysis and financial information retrieval.
 - Designed agent routing and state management using LangGraph architecture.
 - Automated report generation and data-driven insights from multiple financial data sources.
- **Customer Segmentation and Data Analytics, (Python | Machine Learning)** (Aug'25-Sep'25)
 - Performed exploratory data analysis and preprocessing on customer datasets.
 - Applied clustering algorithms to identify customer behavior patterns and segments.
 - Visualized insights using Matplotlib and Pandas for data-driven decision making.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, JavaScript, C, SQL
- **Core Skills:** Data Structures & Algorithms, OOP, DBMS
- **AI/ML:** Machine Learning, NLP, LangChain, LangGraph, RAG, OpenCV
- **Data Analytics:** Pandas, NumPy, Matplotlib, EDA
- **Web Development & Databases:** React.js, Node.js, REST APIs, MySQL, Qdrant
- **Tools:** Git, GitHub, VS Code

WORK EXPERIENCE & INTERNSHIPS

- **Full-Stack Developer Intern | Jodetx - Banking & Payment Solutions** (Sep'25-Nov'25)
 - Developed and enhanced fintech application features using JavaScript and modern web development practices.
 - Integrated REST APIs for payment processing, transaction management, and banking-related functionalities.

- Performed debugging, testing, and optimization to improve application performance and reliability.
- Collaborated with development teams using Git-based workflows and agile development methodologies.
- **Summer Intern | Srajan Spastic Society** (May'25-Jul'25)
 - Assisted in social-impact initiatives focused on supporting differently-abled children and rehabilitation programs.
 - Coordinated activities and communication between volunteers, educators, and participants.
 - Developed teamwork, leadership, and problem-solving skills while working in a collaborative environment.

POR & EXTRA-CURRICULARS

- **Winner of the Fyrst Ideation Challenge 2025** organized by VIT-AP University for presenting an innovative technology-based solution. (2025)
- **Shortlisted Innovator** in the **All India Hackathon 2024** for proposing a novel problem-solving project with practical real-world applications. (2024)
- Actively participated in coding competitions, hackathons, and technology events representing DY Patil International University. (2024-Present)
- Regularly explore and develop projects in Artificial Intelligence, Data Analytics, Machine Learning, and Full-Stack Development through self-learning and hands-on implementation. (2024-Present)
- Solved **200+ Data Structures and Algorithms (DSA)** problems across platforms including **LeetCode**, **CodeChef**, **Geeks-forGeeks**, and **HackerRank**, strengthening problem-solving and algorithmic thinking. (2024-Present)
